

CLOUD DATABOX GIVES YOU ACCESS TO ALL YOUR DOCUMENTS AT ANY TIME

Data management is a key issue that you have to address now if you want to meet the expectations of not only your clients, but also your employees.

Do you want to share, synchronise and store your data in a simple way thanks to highly secure data centres?

Cloud Databox is a collaborative solution for firms with advanced requirements for document management. It is ideal for highly confidential documents, but also for sharing high-value information, managing frequent version changes or exchanging large files.

The challenges that firms must face today are numerous.

In terms of user demands, the challenge of data mobility is particularly difficult to address. There are many sharing and synchronisation solutions available on the market, but there are not many that can truly be integrated into the firm's organisation and which ensure the required levels of security and confidentiality.

Cloud Databox is a unique solution that effectively responds to the new ways of working, and which integrates a multitude of devices without compromising data security or the mobility of employees.

EASE OF USE

Cloud Databox can be accessed via Internet browser, and it has a client which functions with any type of device (iOS, Android, BlackBerry, Mac OS X and Windows). Thanks to synchronisation, all the members of your team can work on the same documents. The file sharing process is thus made more rational, and you no longer have to worry about document transfer.

You can also optimise the use and security of your E-mail inbox via Outlook Plug-in, which is included in our Cloud Databox solution. This enables you to insert links in your E-mails, rather than attaching files to them. A configuration is possible so that all of your attachments are automatically sent via Cloud Databox.

The «drag & drop» widget also facilitates your use of Cloud Databox, since you can send, download or delete files* in your account with complete simplicity.

[*] Files up to 10 GB

MAIN BENEFITS

Performance

Improved collaborative work and productivity.

Mobility

Online and offline access to files anywhere and from any device (PC, laptop, tablet and/or smartphone).

Optimal protection of your confidential documents

Central management of access, limited lifetime of local versions, encrypted access, traceability.

Versioning

Cloud Databox also presents the latest version of information and reduces the lifetime of local versions. You'll no longer have any worries with your old documents!

Optimisation of your E-mail Inbox

Avoid having a full Inbox due to large attachments: the recipient only sees the latest version when he or she needs it.

SYSTEMAT CLOUD SOLUTIONS

Cloud Desktop enables your staff to log in to their Desktop and access their data and their applications (E-mails, business applications, files, etc.) from anywhere: at work, at home, or when travelling.

With **Cloud Business Apps**, you can put your work and management tools in the Cloud, and this makes your desktop applications/software accessible on any type of desktop or mobile terminal.

Cloud Mail offers you the real-time availability of your E-mails, calendars and contacts, wherever you are and on any type of desktop or mobile terminal.

Cloud Backup frees you from the constraints of managing traditional backups on tape, discs or removable peripherals. This solution is compatible with all environments, whether virtual or not.

Cloud Infrastructure offers you top-of-the-line hosting solutions for all of your IT services.

GREEN-IT

Opting for the Cloud is an environmentally responsible thing to do. Virtualising servers and sharing hardware generate economies of scale in terms of the electricity consumption needed to power the servers and their air conditioning: Think about it!

CLOUD DATABOX

CLOUD DATABOX		✓ Included ● Optional
CLIENT INTERFACE		
Customisation	The Web interface to which you and your clients have access may be customised with the logos and colours of your firm, so that your tools all look alike.	✓
Upload Wizard	Can be integrated in your website, enabling you to easily integrate your solution for sharing documents from external users, without compromising the security of your data.	✓
Synchronisation	A powerful tool that enables real-time synchronisation: for example, several users may work simultaneously on the same file without loss of data.	✓
EASY MANAGEMENT OF USERS AND ACCESS RIGHTS		
Automatic authentication	Integration with Active Directory, enabling you to unify user rights in a single location and thus limit coding errors of the rights of each user.	●
Control interface	Central management of all user accounts, passwords (encrypted), structure of folders and related rights.	✓
Customisation of rights	The individuality of rights for each file enables very precise management of the sharing and security of documents, even within a much larger folder.	✓
SECURITY AND TRACEABILITY		
Read receipts	A read receipt may be requested when you send a document.	✓
Remote Wipe	Possibility to delete all data and passwords stored on any device, in case of loss or theft.	✓
Limited-life documents (Poison Pill)	You can add an expiration date to a document before sharing it. Once this date has passed, the document can no longer be used, wherever it is located.	✓
Encrypted access	All traffic between the user's equipment and the control interface uses AES 256-bit encryption.	✓
Document sharing usage report	The manager can also closely monitor and record all activities in the folders. Specific activity reports are available as a function of selected security criteria.	✓
Versioning	History of the various versions of a single file.	✓
Inter-site availability	Data are stored on drives at several different sites for greater security.	✓
TECHNICAL SPECIFICATIONS		
WebDAV	Possibility of opening and editing your files via your favourite WebDAV client: Windows Explorer, Mac Finder, Microsoft Office, mobile app.	✓
Command interface	For specific needs, the "Command Line" interface of Cloud Databox is a scriptable tool to interact with your account. It can be used to process large quantities of data and to automate downloading or synchronisation of documents.	✓
Redundant data centres		✓
Redundant, secure, high-speed Internet connection		✓
Server antivirus		✓
SUPPORT AND SERVICES		
User assistance		Depending on subscribed services
Local installation & customisation		●
Training		●
Data migration		●
